Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to

Art Unit: 2645

be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11, 21, 39, 48, and 73 rejected under 35 U.S.C. 103(a) as being unpatentable over Hamel in view of Haddock, Patent #5742736.

Regarding claims 11, 21, 39, 48, and 73 Hamel teaches a method, system and computer program product according to claims 17, 37, 47, and 72.

Hamel is silent on wherein at least one of the special types of information comprises a uniform resource locator(URL) and where at least one of the actions comprises automatically establishing a connection to the URL.

Haddock teaches viewing and manipulating voice mail messages on a computer display and the contents thereof can be retrieved and connected to applications on the computer (col.4 lines 38-54).

At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to include a computer display like in Haddock to view and access information within voice mail messages as taught in Hamel(col.1 lines 45-52).

One of ordinary skill in the art would have been motivated to do this as automatically connecting to a URL via a displayed hyperlink is old and well-known in the art and since Haddock's user is able to use information(e.g. phone #, points of interest, etc.) to automatically establish a connection to it, URL's are just an example of points of interest that can be accessed with a computer application(e.g. "Internet Explorer").

Art Unit: 2645

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kuter et al., Patent #6,876,729 teaches bookmarking voice messages and selecting the segment of the bookmark.
